

Protective Coatings

All of our products are treated with the same coating process, as detailed below:

- Robust Heat-resistant Powder Coating
- Oven baked

We offer custom-coloured Fatboy Fires, and customers either give us their own colour code, or they can select from our colours. We also offer custom design artwork, decoupage, photo imprints, etc. Any custom paintwork is dealt with individually, as per the customer's requirements, with additional costs and delivery times.

We are continually researching better/alternative coating products in order to maximise the life of the Fatboy Fires. The heat-resistant coatings which we are currently using are only resistant to a certain point. Direct coals over prolonged periods will remove the coating immediately below the coal. This will in no way affect the structural integrity of the product. My personal Fatboy Fire has been standing outside for over 8 years, and it was never painted in any way! Although there are some extremely modern products available, they are not yet cost effective to use on a braai.

Packaging

Fatboy Fires' individual components are bubble-wrapped, and then packed into a durable, double-walled RSC (regular slotted container) corrugated cardboard box. The Fatboy Fire box is 1.1 m x 1.1 m x 0.2m in size, and the Patio Fatboy Fire box is 0.9m x 0.9m x 0.18m in size. Each box has a logo, product details, stacking and handling details on the front face. Once completed, each box contains a complete Fatboy/Patio Fatboy Fire, relevant assembly instructions and a 3 Year Warranty Certificate. The total weight of the packaged product is as follows:

Fatboy Fire: 28 kg

Patio Fatboy Fire: 19 kg
